DETAILED ACTION

The RCE dated 4-10-08 is acknowledged.

Claims included in the prosecution are 15-16 and 19-23.

In view of the terminal disclaimer, the double patenting rejection is withdrawn.

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 15-16 and 19-23 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

According to a) of claim 15, the aqueous phase is a buffer solution. d) recites glycine. Is glycine in the form of buffer? Where is glycine located?

Claim Rejections - 35 U.S.C. § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains.

Patentability shall not be negatived by the manner in which the invention was made.

4. Claims 15-16 and 19-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over either JP 08 231417 or Maitani by themselves or in view of Collins (5,874,075) further in view of JP 61097229 (all are of record).

JP 147 and Maitani disclose liposomes containing erythropoietin. The liposome lipids include synthetic lecithin and cholesterol and phosphate buffer (note the abstract of JP; abstract and Experimental section in Maitani). As well known in the art, liposomal compositions have two aqueous compartments, one within the bilayer and the other outside the bilayer and the hydrophilic compounds are generally added to the hydrating medium such that part of it is encapsulated in the aqueous compartment within the liposome and unencapsulated active agent is in the outer aqueous medium. In both JP and Maitani, the unencapsulated erythropoietin is removed by filtration. However, it would have been obvious to one of ordinary skill in the art not to remove the compound is such is desired.

Collins as pointed out before teaches liposomal compositions wherein hematopoietic factors including erythropoietin are attached to the surface of the liposomes. The phospholipids include dipalmitoylphosphatidic acid. The liposomes further contain PEG (stabilizer) and a phosphate buffer. According to Collins, such an attachment stabilizes the proteins such as erythropoietin. One of ordinary skill in the art would be motivated not to remove the external erythropoietin since Collins teaches that erythropoietin outside the liposomes stabilizes such proteins. JP,

Maitani and Collins do not teach the inclusion of glycine in the liposomal formulations. Such an inclusion however, would have been obvious to one of ordinary skill in the art in view of JP 229, which teaches that glycine is a stabilizer for erythropoietin (note the abstract).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gollamudi S. Kishore, Ph.D whose telephone number is (571) 272-0598. The examiner can normally be reached on 6:30 AM- 4 PM, alternate Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Krass Frederick can be reached on (571) 272-0580. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
